

What If.....Implications for Psi

2022

Thomas A. Burns PhD.

Klamath Falls, Oregon

What if Reality Can be Accounted for in Terms of:

Two Opposed Forces:

- 1) Attraction/Accumulation [slightly weaker than Expansion]
- 2) Expansion/Repulsion [slightly stronger than Attraction]

and

Three States:

- 1) Energy [includes Dark Energy] that is tied to the Expansive Force.
- 2) Mass Based Matter [includes Physical Matter] tied to the Attractive Force.
- 3) An Intermediate “Particle” Medium [includes Dark Matter and known “massless” particles] that constitutes the first move toward Mass Based Matter from pure Energy and responds weakly to the Attractive force.

This proposition is so obvious that it must have been offered before in physics.

Now consider two significant adjustments to the above conception:

Suppose that the three states are in fact two [Energy and Mass Based Matter] always in dynamic tension with the Intermediate Particle Medium in the transition zone in between. Then picture reality as a universe-wide, three dimensional web with every connection at every scale from cells to galaxies participating in this dynamic. This is a systems view of reality rather than the usual material step view advancing from particles to atoms to molecules, etc.

From this perspective, reality is in a constant condition of 1) Energy at one “pole” in the web working with the Expansive force to attract Energy through the Intermediate Medium from Mass Based Matter; and 2) Mass Based Matter at the other “pole” in the web working with the Attractive force to withdraw and consolidate Energy through the Intermediate Medium from Energy. At lesser scales, the Attractive and Expansive forces are in a condition of relative balance, with the Expansive force having a slight edge. At solar and galaxy scales, events can occur that result in extremes in both directions – supernova release enormous amounts of energy but can also leave a hyper dense neutron star. Following the Big Bang, our Reality is generated in the dynamic interaction of the Expansive and Attractive forces as they create and destroy matter at all scales throughout the infinitely interconnected web of existence.

Implications for Psi and Psi Related Phenomena

Since this Attraction-Matter vs Expansion-Energy dynamic is occurring at all scales of existence, all material phenomena are bathed in energy in the form of waves and fields being both drawn into matter and released into universal expanding energy. In this context, from the perspective of attraction-matter, all “things” are separate and interrelated through time and in “empty” space by distinguishable “laws.” From the perspective of energy everything is connected and totally integrated with no separation, time or space. All humans exist in and relate to reality through this dynamic. To the extent they accommodate the attraction-material perspective through their mental faculties of reason and analysis, they experience reality from the perspective of separateness, and their worldviews and consequent behavior are defined by that view. To the extent humans accommodate the expansion-energy perspective through their mental faculties of intuition and synthesis, they experience reality from the perspective of unification, and their worldviews and consequent behavior are defined by that point of view.

In a reality defined by this dynamic, Psi phenomena are nothing more than the evidence of humans participating in the fundamental dynamic of all existence and experiencing and relating to reality from the expansive, totally integrated and interconnected, space and time exclusive energy perspective. These phenomena are to be expected together with all of the other areas of human behavior where energy oriented experience plays a significant role – all cooperative social behavior and all forms of expressive behavior [play, game, ritual and all forms of the graphic, dramatic, plastic, musical and oral arts]. Most forms of spirituality also encourage access to the experience of the universal energy perspective.

While humans think of themselves as “solid” in the material sense, we know that energy surrounding tiny bits of mass accounts for the vast majority of who we are. Energy is everywhere at all scales in our material selves from single cells to tissues to organs to organ systems to the body as a whole. Energy fields are responsible for both our integration materially as separate entities and our fully integrated relationship to surrounding reality. All humans are related and connected through these totally integrated – yet immaterial – energy fields. It is through our fundamental existence and participation in this completely integrated, universal energy domain that Psi, and all related phenomena, can be understood and investigated. The study of human energy fields is in its infancy, but it has already shown great promise – especially in medicine. It comes as no surprise that much of this research is occurring in Asian countries where the spiritual perspective on reality has continued to be respected.
