

Question Of TIME

We Observe
Our Cat Move from Floor to Lap,
Before and After.

Younger and Older,
Past and Future,
Now Is the Movable Present.

Time Is the Pace of Change,
BUT
The Only Constant Is Change.

So,
Seconds, Minutes, Hours, Days.....
We Use To Measure the Pace of Change
Are Not Constant.

Time Changes
Depending on the Strength of Gravity,
Even If
Time Is Nearly Constant
Within Our Small Surface World.

Change Is Universal.

Everything Vibrates Together As One,
While Time Confronts
The Different Rhythms of Internal Changes
In a System
Virtually Infinite In Size
With Enormous Flexibility.

Unity in Diversity.
