

Prime Time 2026

Thomas A. Burns PhD.

Klamath Falls, Oregon

Time is an artificial concept with what has become an associated universal measurement system that we impose on change in an attempt to locate things and events relative to one another and ourselves. Change is real; time is not. But we relate to time as if it is a fundamental component of reality. Our language reflects how pervasive the influence is of this artificial construct. In English, what follows is a list of 104 two-word phrases referencing “Time:”

Time Off	Other Time	Behind Time	High Time
Time In	Life Time	Night Time	Time Table
Time Out	Past Time	Day Time	My Time
Another Time	Between Time	Last Time	Our Time
Last Time	Mean Time	Christmas Time	Your Time
No Time	Time Flies	Spring Time	His Time
On Time	Buy Time	Summer Time	Her Time
About Time	Real Time	Winter Time	Lead Time
Do Time	Lost Time	Nap Time	Only Time
Catch Time	Borrowed Time	Lunch Time	Their Time
Crunch Time	Finding Time	Closing Time	Every Time
Long Time	Right Time	Free Time	Any Time
Lose Time	Next Time	Nice Time	Prime Time
Big Time	Down Time	Same Time	Some Time
Little Time	Double Time	End Time	One Time
Gain Time	Wrong Time	Hard Time	Noon Time
Over Time	Old Time	Play Time	Game Time
Good Time	Half Time	War Time	Show Time
Bad Time	Catch Time	Peace Time	Meal Time
Best Time	Time Before	Time Card	Drive Time
Worst Time	About Time	Clock Time	Bath Time
Serve Time	Run Time	Keep Time	Fast Time
Time Being	Make Time	All Time	Slow Time
Right Time	Dinner Time	Short Time	Before Time
Wrong Time	Bed Time	Wait Time	After Time
Time Zone	Time Piece	Time Line	Time Frame

This list of common English phrases is a taste of how influential the concept of time is in our thinking about virtually all aspects of reality. And in spite of its artificiality, time is a basic variable in science – very often tied to a “constant” that is so large [c^2] or so small [h] that it escapes challenge.
